Key: 'Rt' = Number of routes run by each player during the 2026 season. 'Proj Tgt%' = Projected target share for the current week. 'LWR/Slot/RWR' = % of the player's routes run from left wide receiver, the slot, and right wide receiver, respectively. 'T/R' = % of a player's pass routes in which he's targeted. 'F/R' = Fantasy points per pass route. For defense, 'Z%' is how often the defense plays zone defense. 'Snap' indicates the production of receivers lined up against the defender at the snap and 'coverage' refers to the production of receivers when they are in coverage. For the player stats, green is good (as it pertains to the receiver) and red is poor. In the matchup columns, green suggests an advantage for the offensive player and red an advantage for the defender. '**S**' indicates projected shadow coverage.

Key: These rankings indicate how well a defense has performed against wide left, slot and wide right receivers this season in terms of fantasy points allowed per game. "Perimeter" refers to outside receivers, which is wide left and wide right receivers combined. "Overall" is total fantasy points per game allowed. 'FPOE' is fantasy points allowed over expected. The final column shows the defense's EPA against the pass. The darker red the number, the tougher the matchup for the WR. The brighter the green, the easier the matchup.
